Thames Valley Priorities Committee Commissioning Policy Statement

Policy No. TVPC 60

Cataract Removal in Adults – thresholds for surgery

**Recommendation made by
the Priorities Committee:**

January 2018 / updated October 2018¹

Date of issue:

December 2018

When considering referring a patient for first or second eye cataract surgery the following thresholds must be met to ensure that surgery is a cost effective intervention:

1. The cataract must be sufficient enough to account for the visual symptoms (visual loss or disturbance) experienced by the patient. Alternative causes for the reported visual symptoms should be excluded prior to referring a patient for cataract surgery AND
2. Visual Acuity 6/12 or worse in either eye OR
3. The cataract and visual symptoms experienced by the patient should negatively affect the patient's lifestyle. The following are examples for consideration for this threshold:
 - Significant glare or dazzle in daylight due to lens opacities
 - Difficulty with night vision due to lens opacities particularly if driving
 - A requirement for good vision for employment or caring purposes
 - Difficulty reading e.g. Significant Anisometropia/ Aniseikonia
 - Management of other coexisting eye conditions, including DRSS (diabetic retinopathy screening service) ungradable photograph
 - Refractive error primarily due to cataract
4. The patient must understand the general benefits and risks of surgery AND
5. The patient must want to undertake the surgery when all the above is considered.

Cataract surgery should not normally be performed solely for the purpose of correcting longstanding pre-existing myopia or hypermetropia.

The same thresholds will apply for second eye surgery.

¹ October 2018, updated to version 2.1 to correct spelling of Anisometropia

NOTES:

- Potentially exceptional circumstances may be considered by a patient's CCG where there is evidence of significant health status impairment (e.g. inability to perform activities of daily living) and there is evidence that the intervention sought would improve the individual's health status.
- This policy will be reviewed in the light of new evidence or new national guidance, e.g., from NICE.
